

## PRODUCTIVE TEAMING

become aware of their humans. This means machine must learn to search for achieving productive teaming can be split into **four clusters**: cognitive awareness, action awareness, goal awareness and trust awareness.

action awareness: machines must become aware of their human partners and become able to understand and

goal awareness: machines must become aware of cognitive processes and decision making processes of their

trust awareness: machines must become aware of goals they should achieve together with their human partners and

trust awareness: machines must become aware of human's individual need for trust in them. This starts from safety by
